Abstract of JP7128507

PURPOSE: To largely change hues according to directions of viewing by forming the structure in such a manner that the specular reflected light of the hue having a complementary color reflection with retroreflected light not merely the retroreflected light by retroreflection materials.

CONSTITUTION: This structure of the coating film has a light reflection layer 2 which is formed on a prescribed substrate 1 and a clear layer 5 which exists on the upper layer side of this light reflection layer 2 and has the uniformly and densely disposed retroreflection materials 4, 4.... Light interference materials 6, 6... which exist on the upper layer side than the retroreflection materials 4, 4 and have light transmissivity and specular reflectability are disposed in this clear layer 5.
